Rusty, could you please share the specifics on what needs to be corrected?

also, is this for Lake Powell sampling? here's the descriptive language currently on the web for this data. looks like we may need to correct the narrative below to more accurately reflect the sampling location.

Thanks

EPA has released additional water quality data from August 12, 2015, on the San Juan River between Farmington, New Mexico and Mexican Hat, Utah.

To assess the impacts of the release at the Gold King Mine, water quality samples have been collected from Navajo Nation at numerous intervals beginning on August 7, 2015. The August 7 data was collected for baseline purposes to understand river conditions at the Hogback, New Mexico monitoring location, prior to the impact of the upstream contaminants from the Gold King Mine release.

To assess the impacts of the release at the Gold King Mine, water quality samples were collected on August 12 at eleven locations for 24 metals. Each surface water sample was analyzed for metals including arsenic, cadmium, lead and mercury.

Due to the highly variable conditions typical of this segment of the river, additional testing will be conducted, and we continue to work closely with the Navajo Nation EPA on assessing drinking water, agriculture, livestock, and other critical water needs.

Hi Laura:

I haven't had a chance to see what the correction is, but can you take a look at the page and correct what he's identified as being in error.

Rusty

Steve/Rusty:

Tom raised the concern that the information on the epa.gov website had inaccurate information regarding the lake powell sampling activities. He indicated that the information in Bill's report is correct. Can you run this down with the JIC to see if we can get it corrected on the web?
